

Mr. Jim McKee (EASA Traveling Chiefs) of Alabama Electric, Sheffield, AL stands in front of his ACE HYBRID Radiant Tube Burn Off Oven system.

Jim says of the HYBRID Radiant Tube system: "We have been very pleased with our new 245-RT oven. It has been in service about a year now and we are getting good burn off cycles on every load. The ACE Tech Support has been very good and has helped us fine tune some of our programs."

ACE can help you also with the 93% efficient oven system. The "RT" system provides plus/minus 10° uniformity, NO hot or cold spots, heavy duty construction, and low maintenance.

Contact ACE for more information.
